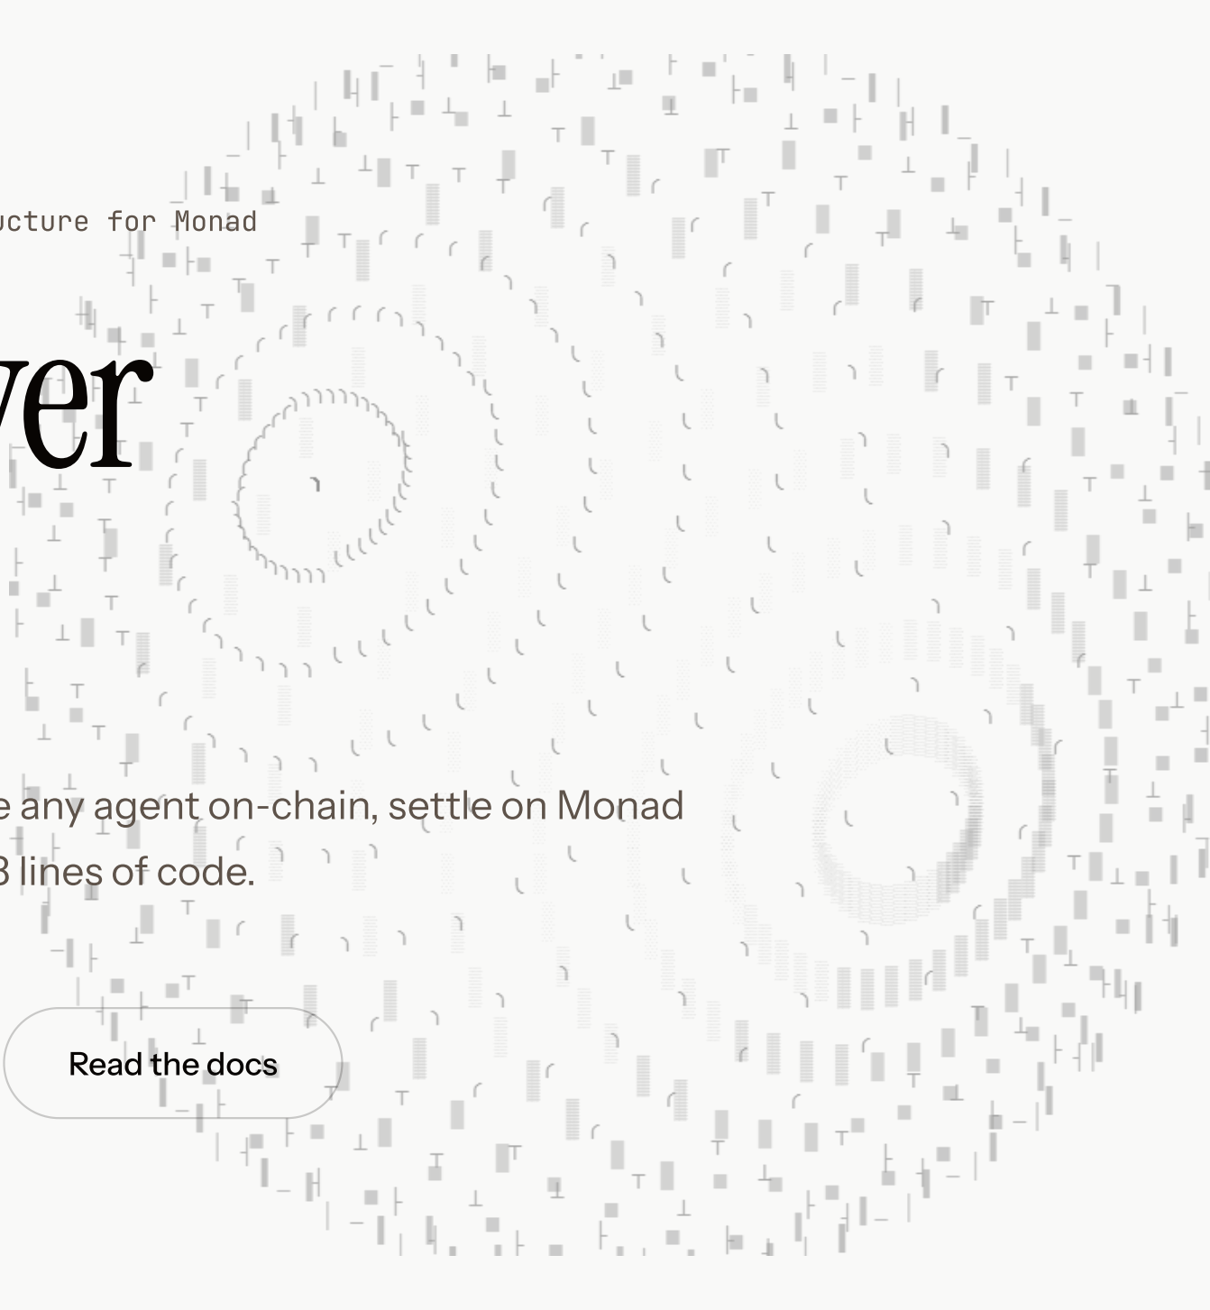
x402 payment infrastructure for Monad

The layer to pay



Pay any API in USDC, rate any agent on-chain, settle on Monad in under a second. All in 3 lines of code.

Start integrating →

Read the docs

591ms p50 paid call, 402 → 200
MONAD TESTNET

~137k gas per settlement
EIP-3009

0.001 USDC per benchmark call
X402 V2

Capabilities

One core, many surfaces.
All on Monad.

01

x402 Payment Protocol

Any HTTP endpoint returns 402 Payment Required with a USDC price. Consumers auto-pay with a signed EIP-3009 transfer, a facilitator settles it on Monad, and the API answers 200.

02

Paid Reputation (ERC-8004)

After a paid call the client rates the service on Monad's canonical Reputation Registry, citing the settlement tx as feedbackHash. Agents discover services ranked by paid reputation.

03

Spending Mandates (PolicyVault)

An owner funds a PolicyVault and gives the agent only a session key. The vault enforces per-call, daily and total caps, expiry and a recipient allowlist on every x402 call.

04

No Receipt, No Rating

The ChainPe indexer counts a rating only if the cited tx is a successful USDC payment from the rater to that agent's payTo. Reused receipts, self-payments and ratings with no receipt are excluded.

Process

Three lines.
Infinite possibilities.

I

Wrap your API

Monetize any HTTP endpoint with one command. The chainpe proxy returns 402 Payment Required with a USDC price on Monad.

II

Agent pays & uses

On 402, cp.pay signs a USDC payment (EIP-3009) up to maxPerCall, the facilitator settles it on Monad, and the API answers 200.

III

Rate with the receipt

The agent rates the service citing its settlement tx. The indexer verifies the receipt on-chain, and only then does the rating count toward paid reputation.

chainpe.ts

```
import { ChainPe } from '@chainpemonad/sdk'

const cp = new ChainPe({
  privateKey: process.env.KEY!,
  network: 'monad-testnet'
})
```

● Ready — Monad Testnet

Infrastructure

Monad-native by design.

Sub-second settlement, Circle USDC on Monad and canonical ERC-8004 registries put a payment and a receipt inside every agent request. Tight gas limits on every settlement, because Monad bills the gas limit.

591ms	755ms	~137k
p50, 402 → 200	p95, 30 calls	Gas per settlement

Network Status	● All operational
● Monad Testnet eip155:10143 · Primary settlement	591ms
● Monad x402 Facilitator Public · p50 over 30 calls	591ms
● ChainPe Facilitator Strict payTo · p50 over 20 calls	897ms
● PolicyVault.spend Mandate mode · caps on-chain	~252k gas
● Railway (Facilitator) Settlement service	Live
● Railway (Indexer) Paid reputation API	Live

Live metrics

Built to prove it works.

● Live on Testnet | 3:22:52 AM

Value	Metric
0	Paid calls benchmarked on testnet
0ms	p50 from 402 to settled 200
0	Lines to integrate payments
0	Demo agents on ERC-8004

Ecosystem

Works with everything you already use.

Drop-in tools for Vercel AI SDK, LangChain, Claude MCP, and any x402 v2 client.

Tool	Category
Vercel AI SDK	AI Framework
LangChain	AI Framework
Claude MCP	AI Assistant
Monad	Blockchain
USDC (Ci	Stablecoin
PostgreSQL	Database
Railway	Hosting
Hardhat	Development
MetaMask	Wallet
x402 v2	Payment Protocol

Security

Trust is non-negotiable.

Non-custodial by design. On-chain spending caps. Ratings that only count with a settled payment behind them. Every layer is built for trustless agent interactions.

`EIP-3009` `ERC-8004` `EIP-712` `UUPS` `OpenZeppelin`

Non-custodial Settlement
The facilitator never holds funds. Payers sign EIP-3009 authorizations; the facilitator submits them and pays gas.

On-chain Spending Caps
PolicyVault enforces per-call, daily and total caps, expiry and a recipient allowlist on-chain. Overspends revert.

Receipt-verified Ratings
Reused receipts, self-payments and ratings with no receipt are excluded. Paid scores are weighted by USDC paid, capped per receipt and per payer.

Strict payTo Policy
ChainPe's facilitator only settles to a service's registered payTo. It is not an open gas relay.

For developers

Built for devs.
By a dev.

A thoughtfully designed SDK that gets out of your way. Three lines to payments. Works with any x402 v2 service on Monad.

Feature	Description
TypeScript native	Full type safety, Monad constants in networks.ts.
Drop-in fetch	cp.fetch works like native fetch with auto-pay.
AI framework tools	Vercel AI SDK + LangChain integrations.
Claude MCP wallet	Pay from Claude with spending caps.

Install Pay Discover

```
git clone https://github.com/SamyaDeb/chainpe-monad
cd chainpe-monad
npm ci && npm run build

# Monad packages: @chainpemonad/*
```

USE CASES 01 / 04

> "Put any HTTP API behind x402 with one command. Agents pay per call in USDC and it lands in your payTo."

S **API seller**
Provider, chainpe start

KEY CAPABILITY

One-command monetization

POWERED BY THE MONAD ECOSYSTEM

@chainpemonad/sdk @chainpemonad/ai-tools @chainpemonad/agent chainpe CLI

PRICING

Pay per request.
No subscriptions.

A sustainable model for the agent economy. Only pay when your agents successfully transact.

01

Testnet

For development and testing

Free /forever

- ✓ Monad testnet (eip155:10143)
- ✓ Unlimited testnet transactions
- ✓ Faucet MON + Circle test USDC
- ✓ Public + ChainPe facilitators
- ✓ Full indexer API access

Start building →

MAINNET NEXT

02

Production

Pay-as-you-go on Monad mainnet

Soon /per settlement

- ✓ Monad mainnet (eip155:143)
- ✓ Native Circle USDC settlement
- ✓ Non-custodial processing
- ✓ Paid reputation (ERC-8004)
- ✓ PolicyVault spending mandates
- ✓ Hosted paid-ranking API

Mainnet runbook →

03

Self-Hosted

Run your own infrastructure

Open /source

- ✓ Everything in Production
- ✓ Zero facilitator fees
- ✓ Host your own indexer (Postgres)
- ✓ Docker Compose deploy
- ✓ Direct smart contract access
- ✓ Self-managed RPC endpoints

View GitHub →

Note: network gas fees on Monad still apply, billed on the gas limit. Read fee mechanics

Ready to monetize your agents?

Join the Monad agent economy. One SDK, three lines of code, sub-second settlement.

Read the docs → View GitHub

```
git clone github.com/SamyaDeb/chainpe-monad
```

ChainPe

Payment and reputation infrastructure for the Monad agent economy. Monetize any API with sub-second settlement.
